

Patient Instructions Following Crown, Veneer, Inlay/Onlay, & Bridge Cementation

- The cement is already set and the Crown, Veneer, Inlay/Onlay or Bridge is ready for immediate use.
- You may experience some minor discomfort for the first few days following your treatment. This should diminish gradually over time.
- If you have been given an anesthetic, this should wear off in a few hours. Please be careful not to bite your cheek and tongue. **Do not eat or drink anything extremely hot or cold** until the anesthetic has completely worn off.
- The bite should feel normal when the anesthetic wears off. If sensitivity to hot, cold or biting pressure persists longer than one week, please call our office for a follow-up evaluation and/or simple adjustment.
- The tooth will look natural in color, so you may not be able to notice the restoration.
- Do not chew any extremely hard or crunchy foods with your new restoration. **Also, do not bite anything with your teeth that can damage them (such as fingernails, paper clips, pens, etc...)**
- We recommend professional maintenance and evaluation at least twice a year. If you have had a periodontal (gum disease) problem in the past you should see us a minimum of three times a year or as recommended by our office.
- **Proper care includes BRUSHING and FLOSSING a minimum of twice daily.** Proper maintenance will not only prolong the life of the restoration but will also help to prevent problems elsewhere in your mouth.

Congratulations! You have just received the most advanced, state-of-the-art cosmetic crown or bridge available today. We are pleased that you are as committed to high quality dentistry as we are, and it is a privilege to provide this service for you.

Please call us at (972) 668-3680 if you have any questions regarding your surgery or healing. At Advanced Smiles, we care about you and want you to be as comfortable as possible.
